A MESSAGE FROM THE COMMISSIONER

It is with great pride that I introduce you to the 1991 Alabama Agricultural Statistics Bulletin. This is the thirty-fourth edition and for many of you in the industry, this publication serves as an invaluable tool in your day to day business operations.

Join me in welcoming David D. Kleweno on board as our new State Statistician. David replaces Duffy Barr who returned to Washington, D.C. earlier this year. I have no doubt that David will be an asset to Alabama Agriculture.

As you can see from the bulletin's cover, this year we are recognizing Alabama's number one commodity--the poultry industry. In 1991, Alabama produced over 875 million broilers for a cash income of $1.15 billion. Production at this level moved Alabama from the third largest broiler producing state in the nation to the second. It is with the utmost confidence that I predict Alabama will become the largest producing state in the near future. Cullman County currently is the largest broiler producing county in the world.

Alabama has 15.1 million chickens, 9.8 of which are laying hens producing over 2.2 billion eggs annually. The egg industry represented over $166 million in farm income for 1991. Egg and broiler production combined total over $1.3 billion in cash income for Alabama. The poultry industry represents over 44% of our farm marketing value in cash receipts. I commend those who have worked so diligently to bring this industry to where it is today, and I pledge this Department's support for its continued growth.

This publication was compiled through the cooperative efforts of the producers who provide the information and the Alabama Agricultural Statistics Service, a cooperative effort of the U. S. Department of Agriculture and the Alabama Department of Agriculture and Industries.

A. W. Todd
Commissioner

State Statistician

A. W. TODD
Commissioner of Agriculture

NOTES FROM THE STATE STATISTICIAN

We are pleased to present you with the 1991 Alabama Agricultural Statistics Bulletin. This is the thirty-fourth edition and shows the latest crop, livestock and poultry data compiled by the Alabama Agricultural Statistics Service in cooperation with the Alabama Department of Agriculture and Industries. Preliminary State and county estimates are provided for 1991 with final data for 1990. Funding for this report was provided by the Alabama Department of Agriculture and Industries. Thanks and appreciation go to Commissioner A.W. Todd for his continued support of the agricultural statistics program.

The information contained within the bulletin is possible because of the splendid cooperation of Alabama farmers, and the assistance of county extension agents and agri-business people throughout the State. They provided the basic input for this and other reports by voluntarily answering our survey questionnaires. A special thank you is expressed to these individuals.

Our office pledges confidentiality of all individual farm, ranch or firm data. We also pledge to gather, prepare and publish the best possible agricultural estimates for the State of Alabama. To meet this mission, we will continue to rely on the support of each person in the agricultural community. Working together we can provide reliable agricultural estimates and information from which users can make sound and effective business decisions.

This year we are featuring on the front cover Alabama's Poultry industry - our number one commodity. Our thanks goes to them for this special design.

A note of thanks also is extended to the Alabama Agricultural Statistics Service staff of statisticians, technicians and enumerators who are dedicated to providing quality, timely information.

David D. Kleweno
State Statistician

1991 WEATHER SUMMARY FOR THE STATE OF ALABAMA

ALABAMA'S WEATHER...AN OVERVIEW

For the year, temperatures averaged 1 or 2 degrees above normal. Extreme highs reached 100 degrees in a number of locations in the northwest and across the Tennessee Valley. Elsewhere, extreme highs were in the upper 90's. The coolest temperatures were mostly in the teens across the State with some single digit readings in the north and lower 20's closer to the coast. It was a wet year in Alabama with most locations in the northern half of the State and in Mobile and Baldwin counties reporting rain amounts of 10 to 25 inches above normal. Only a few places in the north had amounts near normal. In the central and south most totals were near normal to 7 inches above average with a few isolated locations 15 inches above normal. Mobile and Baldwin counties reported the most rain days, approximately 140. Rain was reported on 117 to 144 days across the northern half of Alabama and 106 to 131 days in other areas. Annual totals reached nearly 80 inches in Mobile and Baldwin counties, 50 to 77 inches across the north, and 50 to 60 inches in the central and south with a few areas reporting near 70 inches.

In **January**, rain was reported on 12 to 19 days. Across the northern half of the State amounts were mostly between 2 and 3 inches with over 5 inches in local areas. These totals were 2 to 3 inches below normal. Rain totals of 5 to 9 inches were common in the southern half of the State with isolated areas recording over 11 inches while the coast received nearly 16 inches. Most totals were 4 to 10 inches above normal for the month, a welcomed relief from the dry weather of the previous year. Average monthly temperatures were 2 to 4 degrees above normal. Extreme highs for the month were mostly in the middle and upper 60's with some upper 50's in the northeast and low to middle 70's in the extreme south. Morning lows reached the middle and upper teens from Birmingham northward with lower 20's central and upper 20's closer to the coast.

In contrast to January, heavier rains occurred across the north in **February**. Nine to 11 days with rain provided 8 to 12 inches in the northwest and 5 to 8 inches in the northeast. These were 2 to 6 inches above normal in the northwest and 1 to 3 inches above in the northeast. In contrast, 7 to 10 days with rain in the south provided totals between 3 and 5 inches, falling 1 to 2 inches below normal. Average monthly temperatures were 1 to 5 degrees above normal. The warmest highs were in the upper 60's and lower 70's across the Tennessee Valley to lower 80's in the extreme southeast. Morning lows fell to the lower teens north to upper teens south except for some single digit readings in the north and lower 20's closer to the coast.

Ample rain fell over most of the State during **March**. Nine to 12 days with rain provided amounts between 5 and 8 inches with a few local places in the north recording over 10 inches. These varied from an inch below normal to three inches above. Highs in the middle 80's occurred over the State. The coldest readings were mostly around 30 degrees with some northern locations hitting the middle 20's. The coast felt only the middle 30's. Average monthly temperatures were 1 to 4 degrees above normal.

April was a month with above normal rain amounts except in the southeast. Rain was reported on 11 to 16 days over the State. In the southeast quarter of the State most rain totals were between 3 and 5 inches which was about 1 1/2 inches below normal. Elsewhere totals between 6 and 10 inches were common with some northwest totals over 14 inches. Most of these rain totals were 1 to 5 inches above normal. Temperatures continued to average above normal by 1 to 4 degrees. The warmest daily temperatures reached into the middle 80's with some 90 degree readings in the extreme southeast corner. Lows into the lower and middle 30's were common across the north with upper 20's in colder areas. Middle and upper 30's were more typical for the central and south while the coast and the extreme southeast corner of the State were in the 40's.

May was an extremely wet month across Alabama. Rain totals of 6 to 10 inches were common with local totals exceeding 15 inches. Heavier rains were most concentrated in the western third of the State. Typical totals were 4 to 6 inches above normal. Rain fell at least half of the month, with Geneva reporting rain on 24 days. Temperatures averaged 2 to 4 degrees above normal. Hottest temperatures were mostly in the uppers 80's to lower 90's. Coolest temperatures were generally in the 40's north to 50's south. A low of 39 was reported at Valley Head.

Heavier rains fell in the northeast, central and south during **June** with totals between 5 and 10 inches and 2 to 4 inches above normal. Lighter totals under 2 inches were recorded in the northwest which was 1 to 2 inches below normal. Rained occurred on 10 to 15 days during the month. June temperatures averaged within a degree or two of normal. Hottest temperatures were mostly in the middle 90's, except near 90 degrees over extreme northeast Alabama. Coolest temperatures were mostly in the 50's.

1991 WEATHER SUMMARY FOR THE STATE OF ALABAMA (cont.)

Rain amounts varied over the State in July with the northwest receiving only 2 to 4 inches of rain, 2 to 4 inches below normal. Heavier rains fell over east, central, and southern Alabama where 4 to 8-inch totals were common. These were 1 to 3 inches above normal with the heaviest rain total being 10.55 inches at Camp Hill in Tallapoosa County. July temperatures averaged 1 to 3 degrees above normal over the southern half of the State and 1 to 3 degrees above normal in the northern half. Hottest temperatures were mostly in the middle and upper 90's, ranging from 92 at Auburn to 99 degrees at Muscle Shoals and Brewton. Coolest temperatures ranged from 61 at Winfield to 71 at Mobile and Montgomery.

Rainfall amounts in August showed the usual summertime variation. The number of rain days varied from 6 to 14, except for 18 days near the coast. Most totals ranged between 3 and 5 inches. However, local totals of 6 to 8 inches occurred while a few locations reported less than 2 inches. Temperatures averaged within a degree or two of normal. The daily highs reached the middle and upper 90's with 100 degrees reported at Huntsville, Belle Mina, Muscle Shoals, Winfield, and Tuscaloosa. Coolest temperatures were mostly in the upper 50's to lower 60's but varied from the lower 50's in the colder northern locations to only the upper 60's near the coast.

Rain amounts in September were below normal over all of Alabama. Rain was recorded on only 5 to 7 days during the month. Totals were generally between 2 and 4 inches but varied from less than one half inch in the extreme southeast corner to near 5 inches in isolated spots in the north. The usual totals were 1 to 3 inches below normal. Monthly temperatures were 1 to 2 degrees below normal with the warmest days reaching the upper 90's. The coolest days were in the low and middle 40's except for some upper 30's in colder locations of the north and low 50's near the coast.

The Tennessee Valley and western counties reported rain on 3 to 7 days during October. Rainfall totals of 1 to 2 inches were about one inch below normal. Elsewhere over the State, rain was reported on only 1 to 3 days with amounts under one half inch and 1 to 2 inches below normal. Over one inch fell in isolated locations. Temperatures averaged 1 to 2 degrees above normal. Highs reached the middle 80's in the north with upper 80's in the central and south. The coolest temperatures were generally in the middle 30's. Some upper 20's did occur in colder locations while areas closer to the coast were in the upper 30's.

November was cool and dry until the third week of the month. Average monthly temperatures were 2 to 5 degrees below normal. Extreme daily temperatures ranged from the upper 70's in the Tennessee Valley to low 80's in the central and south. Lows reached the upper teens and lower 20's in the north with some lower teens in colder locations. Elsewhere lows fell to the low and middle 20's with upper teens in colder locations. Rain was reported on 4 to 7 days. Rainfall totals were between 2 and 4 inches with some areas reporting over 5 inches. These totals varied from an inch below normal in the northwest to 2 inches above normal in some central counties.

Warmer than usual temperatures returned in December. Average temperatures were 3 to 6 degrees above normal across the north and 2 to 4 degrees above normal in the south. Afternoon highs reached the low and middle 70's in the north to the upper 70's and low 80's elsewhere. Lows cooled to the 20's but varied from the upper teens in the colder locations to near 30 degrees along the coast. Heavy rains fell 12 to 15 days across the north with some areas in the extreme northwest recording 15 to 20 inches. In contrast, the southern part of the State received only 2 to 4 inches during 7 to 10 days with rain, remaining a couple of inches below normal.

CROPS REVIEW

1991

MARK E. HUDSON

Harvested Acreage of Principal Crops Mixed: Harvested acres of corn, soybeans, hay, peanuts, and cotton totaled 2,022,000 acres for the 1991 season. This compares with 2,064,000 acres the previous year and 2,011,000 in 1989. More acres were devoted to hay, cotton, and peanuts with increases from the previous year of 30,000, 27,000, and 21,000 acres respectively. On the downside, soybeans showed the greatest decline with 90,000 fewer acres. This is the smallest soybean acreage since 1966 when 310,000 acres were harvested. Corn acres for grain also dropped by 30,000 acres from the previous year.

Rainfall Helps Crop Production: Above normal rainfall pushed cotton production up 47 percent, corn for grain 21 percent, peanuts 65 percent, soybeans by 8 percent, and hay up 46 percent from the 1990 drought stricken crop. Peanuts and corn had the greatest boost in yields with increases of 57 percent and 38 percent, respectively.

Early Crop Season Progress: Wet ground delayed field work across the State in January and continued in February for southern Alabama. Breaks in the weather by mid-March allowed farmers to continue land preparation. Fieldwork continued at a near normal pace except for cotton planting in northern Alabama which was delayed until early June. A good moisture supply kept winter wheat in mostly good condition through March. Excessive rainfall in mid to late May caused the winter wheat condition to deteriorate to over 50 percent poor and very poor. Early peach varieties were in good condition when harvest began in early May. Wet weather during the month put field work one to two weeks behind normal. In June field work progressed to near normal despite scattered afternoon thunderstorms. July's weather favored crop development with conditions improving to mostly good or better. This was short-lived as row crops and hay condition declined in August due to hot, dry weather, especially in the northwestern counties.

Late Crop Season Progress: A very dry September further depleted soil moisture causing stress to row crops and hay. Even though conditions were excellent for row crop harvest, seeding of 1992 small grain crops was slowed by dry soil. Light frost across the northern portion of the State affected some late planted cotton and soybeans. Short soil moisture supplies prevailed in November which continued to slow small grain seeding. Freezing temperature during the first week of November damaged or killed some fall vegetable crops. The first significant rainfall since late September fell in late November. Extensive rain in early December caused considerable flooding of some Tennessee Valley fields. Elsewhere in the state, rainfall returned soil moisture to normal which aided germination and development of small grains.

ALABAMA'S FIVE LEADING CROPS: CROP PROGRESS FOR 1991

Crop	Planting Began	Planting Ended	Harvest Began	Harvest Ended
Corn for grain	Mid March	Early June	Late July	Mid November
Cotton	Early April	Mid June	Mid September	Late November
Hay	-	-	Early May	Early August
Peanuts for nuts	Mid April	Early June	Mid August	Early November
Soybeans for beans	Late April	Mid July	Mid September	Mid December

ALABAMA'S FIVE LEADING CROPS: ACREAGE, YIELD, PRODUCTION, AND VALUE, 1991 PRELIMINARY

LIVESTOCK REVIEW

1991

RICK GEESEY

Cattle Numbers Unchanged: All cattle and calves in Alabama totaled 1,800,000 head on January 1, 1992. This is unchanged from the January 1 inventory last year but up 3 percent from the January 1, 1990, inventory. Total cows on hand at 910 thousand decreased 5 percent from last year's inventory of 960 thousand head. Beef cows at 867 thousand head, were 5 percent below the 1991 estimate of 917 thousand head. Milk cows were unchanged. Other class estimates on January 1, 1992, are: All heifers 500 pounds and over, 240 thousand head, up 17 percent; beef cow replacements, 158 thousand head, up 13 percent; milk cow replacements, 16 thousand head, up 14 percent; other heifers, 66 thousand head, up 29 percent from last year; steers totaling 112 thousand head, up 18 percent; bulls 500 pounds and over, 63 thousand, decreased 3 percent; and calves under 500 pounds, at 475 thousand head, unchanged from January 1, 1991.

Hogs and Pigs Down 6 Percent: Alabama's December 1, 1991, hog and pig inventory was 375,000 head, down 6 percent from last year. Breeding hogs decreased to 65,000 head, down 13 percent from a year earlier. Market hogs decreased to 310,000, down 5 percent. The 1991 pig crop totaled 716,000 head, up 1 percent from 1990. Pork producers farrowed 94,000 sows during 1991, unchanged from the previous year. Alabama ranked 22nd among states in total hog numbers.

Milk Production: Alabama's dairymen produced an estimated 521 million pounds of milk during 1991, up 2 percent from the 513 million pounds during 1990. Production per cow averaged 12,707 pounds, compared with 12,214 pounds the previous year. The inventory, at 43,000 head on January 1, 1992, is unchanged from January 1, 1991.

Red Meat Production: The 1991 production of red meat (beef, veal, pork, and mutton) in Alabama totaled 191.6 million pounds (dress weight). This was 8 percent below the 1990 level. Hogs slaughtered, at 141,800 head, rose 7 percent from a year ago.

POULTRY REVIEW

1991

SCOTT A. HINTON

Broiler Production Up 3 Percent: Alabama broiler producers marketed 875.3 million birds in the 1991 marketing year, an increase of 28.4 million from the 846.9 million marketed in 1990. Alabama was second behind Arkansas in broiler production.

Egg Production Decreased: During 1991, Alabama's laying flocks produced 2,186 million eggs, down 20 million from the previous year. There were 9.8 million hens and pullets of laying age on hand December 1, 1991 compared with 9.5 million in 1990. Alabama ranked twelfth nationally in egg production.

Broiler Hatchery Production Up 10 Percent: Commercial broiler hatcheries in Alabama hatched a record 1.03 billion chicks in 1991, 37.2 million more than the previous high of 992.9 million chicks hatched in 1990. Alabama hatcheries shipped 115.8 million broiler-type chicks to other states, while 24.4 million were shipped into Alabama. Egg-type hatchery data are no longer published to avoid disclosing individual operations.

1/ Preliminary. 2/ Marketing year: December-November basis. 3/ Hens and pullets of laying age and annual egg production consist of commercial table egg layers, broiler breeders, egg-type breeders, and farm flocks of 400 birds or less.
*Counties not published separately to avoid disclosing individual operations.

PRICES REVIEW

1991

ANGELA M. HARDEN

Prices Received by Farmers: The 1991 All Commodity Index of Prices Received by Alabama farmers averaged 144 of its 1977 = 100 base in 1991, compared with 142 in 1990. The Livestock and Livestock Products Index, one of the components of the All Commodity Index was 157 of the base, down three points from the previous year. The Crop Index increased 10 points from 1990 to 123.

During 1991, Alabama farmers received lower prices for most of the major crops they produced. Sharp decreases were found in the sale of milk, hogs, eggs, and broilers. On the other hand, beef prices were the highest in the past ten years. The largest increases were found in beef cattle and steers and heifers.

How Prices are Estimated: Prices received by farmers represent monthly and marketing year average prices received by farmers at the point of first sale for all grades and qualities of the commodity sold. Points of first sale by farmers range from bulk sales at the farm to packed and graded products delivered to a local market. For crops the price refers to all sales during the year, regardless of the year harvested. The average price concept is that price which would result from dividing the total dollars received by all farmers, before any marketing charges are deducted, by the total quantity sold. Contract sales are reported in the month of settlement, not when agreements are made. Transactions are finalized when delivery and payment are completed. Prices are on an "as sold" basis, with the following exception: milk is priced free on board (f.o.b.) plant or receiving station. Monthly prices are based on all sales of the commodity during the entire month. Exceptions are hay, eggs, and turkeys, which are based on a five day period centered on the 15th of the month. Marketing Year Average Prices are weighted average prices for crops, livestock and poultry items sold during the marketing year.

Prices Paid by Farmers: The Index on Prices Paid by farmers measures changes in the prices paid for goods and services used in crop and livestock production and family living. The index is made up of five major components: prices paid by farmers for production commodities, services, interest, taxes and wages. The 1991 Prices Paid Index was 189, up five points from the previous year.

1/ Marketing year: December-November basis. 2/ Estimates are for market eggs instead of all eggs beginning December 1982. 3/ Marketing year: September-August basis. 4/ Monthly and season average prices based on 480-lb. net weight bale. 5/ Marketing year: August-July basis. 6/ Monthly price estimates discontinued July 1986. * Not published due to insufficient sales.

CASH RECEIPTS REVIEW

1991

SAMUEL A. BRUNER

Farm Cash Receipts: Cash receipts from farm marketings increased 5.3 percent from $2,821 million in 1990 to $2,971 million for 1991. Livestock and poultry products, valued at $2,219 million, accounted for 75 percent of the total. Crops (including nursery and greenhouse products), totaled $752 million to make up the remaining 25 percent. Non-farm commercial timber receipts increased 6.4 percent from $299 million in 1990 to $318 million. Total farm and forestry receipts (including government payments and other farm income) rose 5.7 percent from $3,489 million in 1990 to $3,688 million.

Alabama poultry and poultry products accounted for 44.4 percent of the state's total receipts. Cattle and calves ranked second with 21.7 percent. Greenhouse and nursery products were third (6.6 percent), followed by peanuts (6.3 percent), cotton (5.4 percent), and hogs (4.2 percent). Each of these six enterprises had sales of over 100 million dollars.

Receipts from the state's broilers and eggs totaled $1,315 million in 1991, down $21 million from the 1990 total of $1,336 million. Cattle and calf returns totaled $646 million, up $57 million from the 1990 total of $589 million. Receipts from cotton, peanuts, and soybeans accounted for about one-half of the crop receipts.

Cash receipts tables: In the county tables those counties with asterisks will be included in "Other Counties" to avoid disclosure of individual operations.

Definitions:

Cash Receipts: Estimates of the value of all agricultural commodities marketed or removed from the farm where produced during a given calendar year. Sales were from open-market channels, placement of commodities under CCC loan, any gain (excess of market value over CCC contract value) on commodities reclaimed from CCC and any other removals. Cash receipts include sales of commodities regardless of the year produced. Cash receipts do not include non-monetary transactions such as on-farm use of agricultural commodities.

Government Payments: Includes both cash payments for feed grain, wheat, cotton, wool, amount paid under agricultural and conservation programs, miscellaneous payments under programs such as Rural Clean Water and Disaster, as well as payment-in-kind (PIK). The Agricultural Stabilization and Conservation Service (ASCS) supplied the information.

Farm Forest Products: Stumpage revenue from sales of forest products from farms. These receipts are considered Other Farm Income. These data and non-farm timber sales by county were provided by the Alabama Forestry Commission.

Non-farm Commercial Timber: Stumpage revenue from sales of forest products taken from other private, forest industry and government owned lands.

Other Farm Income: Includes machine hire and custom work, forest product sales, custom feeding fees, and other farm business-related income.

Value of Production: Crop value is derived by multiplying production by the estimated season average price received by farmers. Value of production for livestock and poultry reflects value of the number of head on the inventory date. It is derived by multiplying the number of head by an estimated value per head as of that date.
